19. Best Practices adopted by Institution:
Best Practice 1

Title of the practice:	Home counseling for the academically weaker students of first year B.E.
Objective of Practice:	To build the confidence of the students to pursue higher education in the field of engineering & technology. Most of the students admitted in first year B.E. course belong to poor farmer's family and tribal families. These students are having inherent fear in their mind set about English as the language of instruction. To control the dropout rate of the students after the first Sessional test it becomes necessary to motivate students by visiting their home and interacting with their parents about Importance of Technical Education.
The Content:	The faculty members and mentors are required to communicate with parents regarding their availability at homes as most of them are working as labors in farms, private organizations and on MREGS run by the state Govt. Faculty members have to work for extra hours for successful conduction of this activity. For convincing the illiterate parent in view of continuous improvement in academic performance of their wards is itself a big challenging task for faculty members. This needs hours together with a counseling session. Many students are not providing factual information to their family members regarding their academic performance
The Practice:	Group of faculty members identifies the students having poor academic performance which includes sessional test poor performance, absenteeism in regular theory and practical classes etc. Plan of home visit is chalked out by a team of faculty members as per availability of the parents at home in the morning session before and after the college working hours. The faculty members visit the parents at their home along with all necessary data related to their ward's academic performance in a sessional test paper, report card etc. Face to face conversation is done with parents in presence of their wards for maintaining complete transparency about the objective of this practice. Also, photographs are captured during the discussion. The overall activity is carried out under the guidance of the first year in charge and higher authority. This practice reflects uniqueness in terms of its execution at higher educational institutions imparting technical education for undergraduate programs. Normally up to a higher secondary level of education we can expect such an approach for the students. Most of the time availability of the parents belonging to the labor class, farmers background is the major constraint. Also, their education level has proved to be one of the major limitations.
Evidence of success:	After doing the home counseling, it was observed that about 90% of the parents have agreed upon the facts about their wards. Students' attitude changes were also observed. This results in overall improvement of their academic performance and communication with their teacher mentor. It also helps to reduce the communication barriers with the higher authorities. The student's involvement in various co-curricular activities is increased. Their stress, fear about the technical subject was also found to be declining. The home sickness feeling was also observed to be diminishing as they feel their teachers and mentors are caring for them like family members.

Problems encountered and resources required:	Initially we have experienced hesitation from the students in visiting their parents at homes probably due to poor economic conditions and availability of their parents. After taking into confidence they got ready to cooperate with us in executing this practice. Also, some of the faculty members have faced some difficulties in participating in this activity due to their family constraints. Afterwards, they adjusted to work willingly to contribute to the success of this practice when they experienced the real life situation of the students from rural and socio economically backward regions. Resources required includes provision of four wheelers to visit remote destinations which is always being made available by our institution as and when required on priority basis.
Best Practice 2	
Title of the practice:	Establishment of placement assistance cell for Pass out Students
Objective of Practice:	Organization of awareness programs for bridging the gap between industry and institution on latest industry trends. To make the students industry ready through various training programs. To help the pass out students for placement assistance and extending the support.
The Content:	Some of the students Unsuccess for placement in industry during the placement drive conducted by the institution. These students usually try to acquire placement at their own effort and get unsuccessful. To assist and help these students for placement, the institution has established a placement assistance cell for pass out students.
The Practice:	Institution is collecting the records from pass out students by continuous follow-up in the form of telephonic surveys. This database consists of information related to the current status of the students about their employment. To extend the support help of Alumni association is taken for conduction of survey. Pass out students who are unemployed are called to the Institution and various placement opportunities are discussed with them. In certain cases these students are given the facility to attend the training to make them competent with recent industrial trends. Also they are given assistance with conduction of Mock Interviews by the Industry Experts, resume building sessions are conducted for regular final year students the pass out identified unemployed students are also assisted during this program. Job opportunities are provided to these pass out students with the help of relation established with the Industries
Evidence of success:	Many of the passed out students benefited out of this practice. Students got placed in various multinational companies and secured their jobs.

Problems encountered and resources required:	Sometimes, it becomes difficult for finalizing the list of beneficiaries of this scheme, help from respective Teacher Mentor is sought to confirm the employment status of the pass out students. Many of them showed least interest in getting training with their junior students. On the part of Placement assistance from an institution point of view separate sessions are not possible to be organized for few in numbers of the pass out students.
Notes:	The satisfactory feedback received by the parents telephonically about employment of their wards are impossible to describe in words, which in turn satisfies the vision of the institution to provide education to the socio economically backward class of the society to make them employable and self dependent.
